Storage Silos & Discharges

Storage Silos & Discharge Systems

STB can provide creative solutions for bulk materials storage, feed and discharge problems.

At STB we have our own experienced project engineering and design team and a large fabrication shop which enables us to design, manufacture and install bespoke silos and feed systems all under one roof and to tight deadlines.

Systems include:

- Silos, process vessels, hoppers and bins in carbon steel, stainless steel and aluminium.
- Discharge devices engineered to suit the product and applications.
- Feeding & conveying systems including: screw conveyors, belt & bucket conveyors, rope and disc, air slide conveyors, vibratory conveyors and feeders.

STB have been designing and building silos and process vessels for over 30 years. Our design and build expertise combined with high quality of finish has lead to our customers coming back to us time and time again.
